CAHABA VETCH

Vicia sativa

Purpose & Fit

Cahaba vetch was bred as a winter forage in southern climates and is a nitrogen fixer with some nematicide properties. With less growth than other vetches, Cahaba vetch won't take over the sward, allowing for more versatility in forage systems.

Growth Pattern

With a white bloom, cahaba vetch can grow to be between eighteen and twenty inches tall.

Quick Data

Seeds/LB:
10,000 - 12,000

Optimum Growth Range:
55°F - 75°F

Seeding Depth:
0.25" - 0.75" Depth

Min Time To Emergence:
7 - 14 days

Planting Rate (Monoculture):
10,000 Lb/A - 12,000 Lb/A

Tons of Dry Matter an Acre:
1.5 - 2
